

## Master's Degree in Computer Science

**Regulations for obtaining credits for the activities “Other knowledge useful for the integration into the labour market” (Altre conoscenze utili per il lavoro) and “Educational internship” (Tirocini formativi e di orientamento)**

The Master's degree in Computer Science includes the following activities to obtain credits (CFU) since the academic year 2016/2017:

- **“Other knowledge useful for the integration into the labour market” (3CFU)**
- **“Educational internship” (3CFU)**

These 6 CFU can be obtained through any of the activities listed on the Moodle “Other Training activities”. In addition, the student can propose an activity, coherent with his/her study plan.

In order to obtain the CFU for an activity, it is necessary an adequate certification that possibly quantifies the amount of work done. The activities need to have been done while the student was attending the Master's degree, or shortly before or shortly after that. In addition, the student must not have obtained credits already for such activities. Acquiring 6 CFU usually means doing 3 activities. Before starting one, a request needs to be submitted and approved by the prof. responsible for the “Other Training Activities”. This is to ensure that it is coherent with the study plan and, consequently, it will be recognised afterwards.
